

VELOSUB

FUN & FAST AQUATIC VEHICLES

Presentation

VELOSUB is a small pedal powered aquatic vehicle, friendly and funny, for beach and water sports activities.

By using **VELOSUB**, you can go **twice the speed of swimming or fins**, with equivalent effort, and admire the bottom of the seas thanks to the **underwater glass vision screen**.

No need for lessons. You can immediately lie down on it, catching the handles and start to pedal. You can then steer by using your hands or inclination of your body.

Because **VELOSUB** easily increases your speed and your range in the water, it allows you to perform “aquatic stroll” along the coast, to follow schools of fish effortlessly, to swim alongside a coral reef, a coast and admire the flora and fauna of the aquatic world: sea, lake or river.

Your aquatic strolls are very safe, as **VELOSUB** brings you about 30 kg of floatability.

The propeller is located in a nozzle so that the risk is very low for others swimmers.

Kids can easily enjoy **VELOSUB** from about 7 years, if they know to swim and under constant adult supervision.

Features

VELOSUB is delivered, in **2 parts** which fit inside each other.

It is sent in a plastic wrap of 145 x 65 x 36 cm, with “How to use” instructions.

Total weight packed is 15,5 kg.

The forward float fits in the rear part and is **adjustable to your size** by hand with a pin in 4 adjustment positions.

The total length varies from 2,16 to 2,40 meters. High: 0,55 meters, Width: 0,53 meters, Weight: 14 kg

Maintenance is limited: rinse it daily with fresh water during intensive use periods. After each season, you should completely rinse it, and inject marine grease in the mechanical box once a year.

A part-list is available on demand.
